

a referring device for referring to page information corresponding to the document information;

a selecting device, when the referring device recognizes that at least one page of the document information should be received, for selecting the page from said plurality of pages of the document information;

A1 a receiving device for receiving said selected page of said document information;

a display device having a display panel which allows a whole of one page of said document information to be displayed thereon at a time; and

a display control device for displaying said document information received by said receiving device on said display panel.

5.5 B15 > 21. (Amended) A document information communicating system comprising: a sending apparatus for sending document information which is divided into a plurality of pages; and a receiving apparatus for receiving said document information and displaying said received document information,

A2 said sending apparatus comprising a sending device for repeatedly sending said plurality of pages of said document information,

said receiving apparatus comprising:

a selecting device for selecting at least one page from said plurality of pages of the document information;

a receiving device for receiving said selected page of said document information;

a display device having a display panel which allows a whole of one page of said document information to be displayed thereon at a time; and

a display control device for displaying said document information received by said receiving device on said display panel, wherein

said sending device comprises:

a communication signal generating device for generating a communication signal including said document information;

a spreading device for spreading said communication signal by using a spreading sequence; and

A2 a communication signal sending device for sending said spread communication signal, and

said receiving device comprises:

a communication signal receiving device for receiving said spread communication signal;

an inputting device for inputting a password;

a spreading sequence generating device for generating said spreading sequence by using said input password;

a despreading device for despreading said received communication signal by using said spreading sequence generated by said spreading sequence generating device; and

an extracting device for extracting said document information from said despread communication signal.

Sub B.15) 25. (Amended) A document information receiving apparatus for receiving document information which is divided into a plurality of pages and displaying said received document information, said document information receiving apparatus comprising:

A3 a referring device for referring to page information corresponding to the document information;

a receiving device, when the referring device recognizes that one page of the document information should be received, for receiving the one page of said document information;

A3 a display device having a display panel, a size of said display panel corresponding to a size of one page of said document information; and

a display control device for displaying said received one page of said document information on said display panel.

Please add new claims 28 and 29 as follows:

5.3 B.15 > --28. (New) The document information communicating system according to Claim 1, said sending apparatus further comprising:

a dividing device for dividing each page of said document information into a plurality of blocks; and

a sending device for sending said plurality of blocks, wherein each block includes a header block and a document information area block;

and

A4 said referring device refers to page information included in the header block, and recognizes whether the page of the document information should be received. --

--29. (New) The document information receiving apparatus according to Claim 25, wherein

each block of the document information divided into a plurality of pages includes a header block and a document information area block; and

said referring device refers to page information included in the header block, and recognizes whether the page of the document information should be received.--
